

South River Science Team Human Exposure Pathways Evaluation

Activities Update
Expert Panel Meeting
October 7, 2009

Human Exposure Evaluation

The key objectives:

- **better identify potential exposure,**
- **define potential risks and uncertainties,**
- **communicate information to the public.**

Human Exposure Evaluation

Exposure Team Members

DEQ: Don Kain, Calvin Jordan, Bill Hayden

EPA: Betty Ann Quinn

VDH: Doug Larsen, Jonathan Falk, Ram Tripathi, Dwight Flammia, Julia
Murphy

DGIF: Steve Reeser, Paul Bugas, Nelson Lafon

DACS: David Brown

DuPont: Mike Liberati, Ralph Stahl, Annette Guiseppi-Elie, Tim Ireland

Human Exposure Evaluation

Exposure scenarios to be evaluated

- √ Fish Consumption
- √ Recreational Use of River
- √ Potential Drinking Water exposures
- √ Contact with soils on the floodplain
 - Potential dietary exposures
 - Domestic consumption, e.g., Garden crops, Beef, Poultry
 - Hunting consumption, e.g., waterfowl, small game

Communicating to public on these issues

Human Exposure Evaluation

Floodplain soils

- Potential exposure evaluated:
 - ✓ direct contact (soil sampling);
 - ✓ ingestion of garden crops (2-year garden study);
 - ✓ ambient air (2 rounds of ambient air sampling)
- Next steps – communicating results
 - ✓ General conclusions included in fact sheet,
 - Letters to landowners in final review,
 - Specific results on soil samples
 - General conclusions
 - Fact sheet on soil sampling in review
 - Peer review publication of garden crop study in final review

Human Exposure Evaluation

Potential dietary exposures

- Domestic consumption, e.g., Beef, Poultry
- Hunting consumption, e.g., waterfowl, small game
- √ Literature review of tissue levels completed
 - Includes domestic & game animals, total and methyl mercury
 - In general, results consistent with expectations
- √ Waterfowl samples results available
 - 10 Canada geese, 10 Mallards, 2 Wood ducks
 - In general, results consistent with expectations
- √ Results of small game analysis
 - Muskrats, squirrels available
- Next steps: develop plans to evaluate potential consumption

Human Exposure Evaluation

Potential dietary exposures

- For wildlife evaluation, sampling plan for deer that graze on the floodplain based on likely exposure scenarios will be developed. Considerations for developing the plan include:
 - Rationale for choosing deer (versus, for example, raccoons, mourning doves, opossum, turkey, etc)
 - Supplemental sampling of Wood ducks.
 - Results of prior wildlife (waterfowl, squirrels, muskrats, snapping turtles)
- Sub-team (Jordan, Quinn, Bugas & Guiseppi-Elie) to develop plan
 - Draft in development
 - Study to take place in the next six months.

Human Exposure Evaluation

Potential dietary exposures

- For livestock evaluation, sampling plan for cattle that graze on the floodplain based on likely exposure scenarios will be developed. Considerations for developing the plan include:
 - How cattle are used and consumed
 - How milk from cattle is used/consumed
 - Defining which cattle actually graze on the floodplain
 - Use of the VDACS post-mortem facilities for determining general background levels as well as potential floodplain animals
 - Incorporating background levels in supermarket beef products
 - Rationale for choosing cattle (versus goats, sheep, pigs, poultry)
- A sub-team (Jordan, Quinn, Brown & Guiseppi-Elie) will draft plan for review by rest of team, implementation 2010

Human Exposure Evaluation

Health survey at local clinics

- √ Local physicians (explicitly made aware of issue) have not reported any signs/symptoms
- √ Local health clinics have been provided literature (in both Spanish and English)
- Health survey to address effectiveness of consumption advisories
 - Survey completed
 - Data being analyzed

Human Exposure Evaluation

Communication

- Disseminate information to the public
- Opportunities:
 - √ Fish advisory signs/information kiosks
 - √ New signs in English & Spanish
 - √ Information to local health clinics
 - √ Information to local physicians (Newsletters)
 - Fact Sheets (2 completed, 1 in review)
 - Communications to landowners (in progress)
 - Meetings with local officials
 - Public presentations (rotary, schools)
 - Community advisory panel (in progress)

WARNING

Health advisory on eating fish

Eating most fish from this location may be harmful to your health. These fish may contain mercury. Eating fish contaminated with high levels of mercury over time can permanently damage the brain, kidneys and unborn child.

Women who are pregnant or may become pregnant, nursing infants and young children should not eat the fish listed in the table. Tables should follow the directions in the table re: the type and amount of fish to eat.

For more information:
Vermont Department of Health
800-848-8484
www.vdh.vermont.gov

Table 1: Fish from this location

These fish are from the Contingency of the U.S. Coast Guard's response to the oil spill in the Gulf of Mexico. These fish are from the Contingency of the U.S. Coast Guard's response to the oil spill in the Gulf of Mexico.

The warning applies to the fish listed below:

¡CUIDADO!

RECOMENDACIONES DE SALUD SOBRE EL CONSUMO DE PESCADO

Puede que los pescados de estas aguas contengan mercurio. El mercurio puede ser peligroso para su salud. De los pescados de estas aguas, solo deben consumirse las truchas. Las truchas rapadas han sido examinadas y son aptas para el consumo.

Human Exposure Evaluation

Fact Sheets

✓ Initial fact sheets completed

✓ Fact Sheet 1: General Introduction
– *About the South River Science Team*

Fact Sheet 1

✓ Fact Sheet 2: Exposure Summary
– *People, Mercury, and the River*

Fact Sheet 2

– Other Fact Sheets, as warranted

- Potential for 2009

- Soil sampling results (as relevant to human exposure) in review
- Wildlife
